

R Project Walkthrough

Fundamentals of Data Science

Jeremy Teitelbaum

R Project Walkthrough

1. Use Rstudio to “start a new project in a brand new working directory”
2. Create a new “R Notebook” with your preferred title
3. **Rename YOUR NOTEBOOK FILE** using “save as...”. The title from part (2) is *not* the filename.
4. See [notebook](#)

Structure of an R notebook

1. Stuff you type is by default treated as markdown, just as in the Jupyter case.
2. You create an R code cell like this, and run it by clicking the arrow or using CTRL-ENTER.

```
```{r}
print("hello world")
```
```

```
[1] "hello world"
```
